## INSTITUTIONAL PROFILE

If you are interested in **Erasmus+ Capacity Building in Higher Education (KA2 – CBHE)**, please describe your project idea shortly:

Capacity Building in Higher Education focussing international relations management and quality assurance including strategic planning and science diplomacy

**Other relevant information** (if applicable):

Situated in the heart of Europe, the city of Salzburg offers easy access to neighbouring countries and to some of Austria's most beautiful alpine national parks. It is also a culturally vibrant city, home to world-famous performing arts and music festivals. Operating in this setting, the University of Salzburg offers international students and scholars a broad and unique range of experiences.

Most of the University's twenty sites are within walking distance of each other, and are located in Salzburg's medieval historical centre - listed as world heritage by the UNESCO - or in purpose-built research and teaching facilities nearby.

Salzburg is one of the safest cities in the world, and the University's excellent student-to-staff ratio means students also enjoy a supportive environment and learning culture.

The largest higher education institution in the Federal State of Salzburg, the University of Salzburg is central to the region's scientific, economic and cultural life. More than 50% of academic staff and approximately 38% of the University's students come from international backgrounds.

The proximity of the mountains, the University's great sports facilities and the cultural events staged in the city combine to offer an outstanding quality of life.

## INSTITUTIONAL PROFILE

INSTITUTION and CONTACT PERSON:			
Last Name	Homar	First Name	Philipp
HE Institution	Danube University Krems		
Department	Law and International Relations		
Position	Research Fellow		
Address (HEI)	Dr.-Karl-Dorrek-Strasse 30		
Postal Code & Town	3500 Krems an der Donau	Country	Austria
Telephone	+436507018443	Email	<a href="mailto:philipp.homar@donau-uni.ac.at">philipp.homar@donau-uni.ac.at</a>
Web address	<a href="http://www.donau-uni.ac.at/recht">www.donau-uni.ac.at/recht</a>		
<b>Experience in international cooperation</b> (mobilities, projects, available study programmes in English language):			
<p>Research stays at international research institutions (The University of Hong Kong; Max Planck Institute for Innovation and Competition, Munich);</p> <p>Several (third party funded) research projects with international partner institutions;</p> <p>Master's program in International IP and Competition Law (planned in the future); English lectures in Intellectual Property Law at WU Vienna (already held);</p>			
INFORMATION ABOUT PLANNED PROJECT(S):			
Discipline(s) / Academic field(s)	Law		
Type of institutions you search	Law Faculties; IP-Law Firms, Business Associations		
If you are interested in <b>Erasmus+ International Credit Mobility (KA107 – ICM)</b> , please tick the preferred mobilities:			
<input checked="" type="checkbox"/> from Austria to Russia		<input checked="" type="checkbox"/> from Russia to Austria	
<input type="checkbox"/> Student Exchange (BA, MA, PhD)		<input checked="" type="checkbox"/> Student Traineeship (BA, MA, PhD)	
<input checked="" type="checkbox"/> Staff Teaching		<input checked="" type="checkbox"/> Staff Training	
If you are interested in <b>Erasmus+ Capacity Building in Higher Education (KA2 – CBHE)</b> , please describe your project idea shortly:			
<p>As the European Copyright Law is currently undergoing a comprehensive reform process, the project aims at facilitating research cooperations and exchanges related to IP Law (with an emphasis on Copyright Law). For example, researchers, students and legal professionals from Austria and Russia can establish a platform for legal comparison of both the current legal situation and the reform discourse.</p> <p>Furthermore, capacity building in the field of IP law is intended as (in the long run) a curriculum in International IP Law for students and legal professionals (judges, lawyers, etc.) should be developed.</p>

All Projects involving Teacher Training, Projects about Intercultural / Interreligion, Human Rights / Inclusive Education			
<b>Other relevant information</b> (if applicable):			
The University College of Teacher Education Vienna (KPH) was founded in 2007.			
The institution is unique in Europe in its ecumenically oriented approach. Moreover, with its five campuses in Vienna and Lower Austria it is Austria's largest private university college of teacher education. Based on a balanced curriculum of initial teacher training, in-service teacher training and further education, the KPH offers opportunities for teachers to acquire qualifications and professionalization in order to be able to meet the challenges in the fields of general pedagogy (Primary / Secondary / Inclusive Education) and religious education.			
Since autumn 2016 we focus increasingly on interreligious relations, beginning integrating Muslim, ALEVI and Jewish training programmes of initial teacher education. We provide opportunities to study the diversity of Abrahamic religions and to contribute to a peaceful, pluralistic evolution of our society.

## INSTITUTIONAL PROFILE

If you are interested in **Erasmus+ Capacity Building in Higher Education (KA2 – CBHE)**, please describe your project idea shortly:

Internationalization of automobile production demands of new training programs for specialists.

The European experience in developed market economy and advanced technologies in the automobile industry, when applied to the educational process in PC, would contribute to the quality of education and to the training of a new generation of specialists within European and global economic space. Introduction of a stable and internationally recognized system of specialist training in transport engineering, which meets the requirements of Bologna process, is adapted to the country's changing needs, ready to change its social and economic conditions and takes into account the specific character of its different regions.

The project is aimed at developing of modern Master Program and modernization PhD courses in PC Universities.

This Program should be especially created on basis of the Master's program in Vehicle Engineering of European Universities operating in the project consortium.

If you are interested in <b>Erasmus+ Capacity Building in Higher Education (KA2 – CBHE)</b> , please describe your project idea shortly:			
<p>The proposed topic “Development of MES (Modular Employable Skills) Platform in 3D Modelling for Engineers”.</p> <p>Nowadays it’s crucial to encourage engineering education sector modernization. Russian and CIS engineering companies strive for high-qualified new generation engineers able to use new technologies to develop competitiveness at the global market. Therefore European technologies in the field and expertise of their implementation into the training process are sure to enhance the system of training and retraining of specialists in engineering.</p> <p>The system of specialists re-training must take into account such factors as the reduced time availability, the individual needs of industrial companies, the experience and the level of expertise of engineers. Considering the above mentioned factors, one of the solutions to this problem is the development of variable modular course in 3D modeling for different branches of engineering, based on the concept of "Labor Skills Modules» (MES-concept).</p>

<p><b>Development of multicultural educational environment (in the PC participating in the project)</b></p> <p>In a world experiencing rapid change, and where cultural, political, economic and social upheaval challenges traditional ways of life, education has a major role to play in promoting social cohesion and peaceful coexistence. Through programmes that encourage dialogue between students/teachers of different cultures, beliefs and religions, education can make an important and meaningful contribution to sustainable and tolerant societies. HEIs are to become key institutions for transmitting values and attitudes that honour openness and learning from difference. This requires the development of appropriate competences of all participants involved in educational process, including teachers, administrative and managerial staff of universities, colleges, and schools, representatives of ministries and educational authorities.</p> <p>The project's objective is to contribute development of multicultural educational environment through establishing a system of sustainable professional development in education on the basis of the best EU cross-cultural practices, innovative teaching methodologies and approaches to intercultural tolerance.</p>

## INSTITUTIONAL PROFILE

determined by the great demand for the results of the solution of the fundamental problems posed in this project, key problems and blocks of concrete tasks aimed at optimizing the energy efficiency of buildings of various types in the face of a huge and still not realized potential for energy saving Buildings both in Russia and in European countries.

**Project no. 2****Control system for reliable hybrid-generating and environmentally secure thermo- electro-power supplying microsystem with a high techno-economic performance**

- 1) Ensuring reliable and trouble-free of power supply as during simultaneous and autonomous operation with an external power system;
- 2) optimization of the cost of electricity and power purchased on the market and produced by domestic generation;
- 3) reduce the cost of equipment operation;
- 4) reduce energy losses;
- 5) improve the quality of electricity.

**Expected scientific and technical results:**

1. Creation of high efficiency hybrid energy supply systems with fuel-sametime and fuel-independent power generation.
2. Elaboration of energy efficient technology for renewable sources of energy use.
3. Development of science-based technical specifications, norms, directives and standards as a means to further improve the supply of industrial and municipal users.

**The expected economic results:**

1. A significant reduction in production costs of energy resources consumed by industry, intelligent buildings and vital infrastructure.
2. Uninterrupted and highly reliable power supply of objects functioning in conditions of remoteness from major energy sources, ensures failure-safe operation of major equipment and shutdowns of industrial processes.

**Expected social results:**

1. Automated hybrid generating systems provide high environmental performance and minimize the impact on the environment.
2. Sustainable integrated energy supply highly vulnerable to life-supporting infrastructure

**Project no. 3****Study options for auxiliary power plant based on fuel cells for a "more electric" aircraft.**

One of the directions for improving the characteristics of aviation on-board power sources is the use of fuel cells, which allow receiving electricity directly from the on-board fuel stock. For these purposes, the possibility of using fuel cells with Polymer (Proton) Electrolyte Membrane (PEM), they are also proton exchange membranes and Solid Oxides Fuel Cells (SOFC). A justified selection of the type of fuel cells and the power plant based on them, proposed for use in aviation, can only be done on the basis of a system analysis for a comprehensive assessment of the operational capabilities of a particular type of power plant. In order to conduct such an analysis, it is necessary to develop a mathematical model of the power plant, which makes it possible to evaluate all its main mass and dimension characteristics and compare them with similar characteristics of power plants of other types. In this respect, it is necessary to take into account that a number of basic characteristics, used in compilation of a mathematical model, can only be obtained experimentally. It is planned to conduct special experimental studies to clarify the necessary characteristics.

**Project no. 4****Research on operational efficiency of de-icing system on composite elements of wings and fuselage of aircrafts.**

The application of elements made of composite materials with thermophysical properties, which significantly differs from the properties of aluminum alloys, into the design of an airframe structure requires additional studies. It is necessary to study the icing process on composite elements, to evaluate the efficiency of the existing anti-icing system. Elaborate recommendations for improving the design of the system to ensure reliability.

**Project no. 5****Studies on strength and reliability of aviation structure elements**

Design of aircrafts by using the method of ensuring a safe resource provides a predetermined operation period for a fleet of aircrafts of this type with a very low probability of fatigue failure. The method of operational survivability, which includes the principles of permissibility of damage and safe destruction, must ensure that the design of the aircraft

## INSTITUTIONAL PROFILE

withstands operational loads after the damage or destruction of one or more of its elements, which in turn, requires periodic inspections during the entire park operation period. The aircraft's design life is estimated based on the results of full-scale tests, the program of which is based on the analysis of standard flights considering the statistics for analog aircrafts. At assessing aircraft loading by flight test results, flight records of vertical overloads at the center of gravity are used, which are subjected to schematization in order to obtain integral repeats of damaging factors. Studies and statistical analysis of vertical overloads, depending on the duration of flights, as well as the justification of correlation equations describing the change in the values of the typical frequency of equivalent vertical overloads, is an actual scientific task requiring systematic monitoring. The obtained values of equivalent vertical overloads corresponding to the full flight range of aircraft operational load should be used to further construct the forecast model of resource elements of the power structure of aircrafts under operation conditions as per technical condition.

**Project no. 6****Studies on damageability and equivalent operating hours of airframe**

As a result of varying loads in the load-carrying structure of an aircraft is a gradual damage accumulation, leading to formation of fatigue cracks, failures and destruction, often resulting in disastrous consequences. A number of difficulties occur associated with the necessity of determining integral and differential frequency of vertical accelerations, boost ratios and other parameters necessary for establishing equivalents, due to a significant difference in loading of individual aircrafts of the fleet, various approaches and schematization methods of operational loading spectrum. Therefore, the research topic in this direction is an actual scientific and engineering task. On the basis of the study of the real loading spectrum of aircrafts, it is assumed to develop a methodology to assess the average hourly damage, determining the actual flying time for the aircraft, which allows to determine the equivalent hours of flight time, resource consumption, and therefore, the due date of the next repair, frequency of monitoring the technical condition, residual life of critical zones and elements of the aircraft. It is obvious that the planned research is particularly relevant in the development of new technology, since, despite the fact that the measurement results may be of private nature, the main approaches and relations are quite universal and will remain generally open for necessary adjustments.

**Project no. 7****Statistical analysis of scattering of aircraft's airframe**

Statistical analysis of failure of load-carrying structure of the airframe of an airplane is a very urgent task in connection with the need to switch to operation of aircraft equipment in terms of technical condition and survivability of the structure. The peculiarity of this task is that the selective sets of values of the operating time for failure of the responsible design zones that are formed as a result of targeted inspections are incomplete, due to the fact that the operating time at the time of inspection of the aircraft of the fleet differs, and also the inspection of the structure is carried out immediately along several dangerous zones, and the aircraft may be temporarily withdrawn from service due to failure of one of the considered zones. The moment of carrying out of target inspections is appointed, when planes have reached the certain size of total equivalent operating time. This value of the equivalent operating time is determined for a particular zone based on the results of its fatigue tests and the corresponding stock life factors. For some areas, the timing of the start of the targeted inspections may be assigned in accordance with the time of the detection of failures in the same zones on more loaded aircraft of this type. Thus, the topic of the planned study aimed at developing methods of statistical analysis in such unusual situations is topical.

**Project no. 8****Expansion of international cooperation in solving the problems of development of continental and intercontinental power systems with environmentally friendly installations based on renewable energy sources****Goals and objectives of the project:**

1. Joint research and implementation of methods for optimizing the structure and parameters of continental power systems, including:
  - a high proportion of installations based on renewable energy sources;
  - energy storage devices of various types;
  - managed energy consumers;
  - smart distribution networks.
2. Development of mechanisms for international cooperation in solving key problems of energy development.
3. Usage of experience and scientific data accumulated by project participants for obtaining synergistic effect by the

## INSTITUTIONAL PROFILE

countries participating in the project.

**Project no. 9****Sustainable development of smart cities energy systems**

The goal of the Climate Action Plan 2050 adopted in 2016 is to achieve global greenhouse gas neutrality by 2050. The target of the project is to define the vector of the sustainable development for all parts of modern city energy complex that assumes the digitalization and intelligent control of the entire energy system. It also means the increase of energy efficiency at all energy sources, transmitting system and all energy consumers in the city.

**Project no. 10****"Sustainable energy systems in industry" - Development of PhD program in English**

The objects of the program graduates professional activity are: thermal power plants, power supply systems enterprises, small-scale energy facilities non-traditional energy sources; power units, steam and gas turbine units; heat pumps; fuel cells, hydrogen power plants; heat- and mass-exchange devices for various purposes; heat and power networks; the coolant and the working medium energy and thermal technology installations; standardization system; systems and diagnostics of automated process control in heat power engineering and the power industry.

**Project no. 11****"Intelligent energy systems in industry". Development of Master Program in English**

The developing master program will encourage its graduates to solve the following tasks in the field of industrial heat and power systems:

- to develop and maintain modern power engineering and heat installations;
- to ensure rational use of fuel and energy resources at industrial enterprises;
- to conduct a feasibility study with justification of the priority directions for solutions of resources saving problems with a combination of centralized and autonomous power supply including the renewable energy sources usage;
- to create advanced life support systems at enterprises;
- to develop mathematical models of studied objects for analyzing their efficiency via modern computer programs;
- to design the intelligent energy systems for enterprise operation.

**Project no. 12****Energy maintenance systems for Spacecrafts**

The project assumes investigations of energy maintenance systems in the spacecraft, thermal control design, heat pipe technology applications for providing the required thermal regimes.

<b>Experience in international cooperation</b> (mobilities, projects, available study programmes in English language):			
<p>Prof., Dr. Vera Zabotkina has expertise in EU project management (Erasmus+, EMA2, EM Joint MAs, Tempus, Council of Europe, UNESCO and UNICEF projects, etc.). She is Bologna promoter and has experience in developing the university strategy of international cooperation with focus on compatibility of degrees, and curricula development for 2 cycles based on the needs of the labour market. She has also expertise in setting up quality assurance system within dual degree programme within Joint European TempusProject "Enhancement of Russian creative education: new Master programme in Digital Arts in line with EU standards". She is also an Expert of the National Training Foundation, and a certified Higher Education Reform Expert (HERE). Prof. Zabotkina is the editor and one of the authors of the Quality Handbook for Joint International MA Programmes. She was coordinating a group of six universities (subject area group – modern languages, translation) within the Joint Tempus project "Tuning Russia" and has offered more than 190 publications including 5 monographs and articles on international projects. She is a member of the editorial board of "International Tuning Journal", concentrating on the competence-based approach to the design of new programmes. She was a Russian coordinator within LLL project CREAN (Children's Rights Erasmus Academic Network).</p>
